25	Differentiate between Viruses and Trojans in context of networking and data communication threats. OR Differentiate between Website and webpage. Write any two popular example of online shopping.	2
Ans	Virus: Virus is a computer program or software that connect itself to another software or computer program to harm computer system. When the computer program runs attached with virus it perform some action such as deleting a file from the computer system. Virus can't be controlled by remote. Trojan Horse: Trojan Horse does not replicate itself like virus and worms. It is a hidden piece of code which steal the important information of user. For example, Trojan horse software observe the e-mail ID and password while entering in web browser for logging. OR Web Page is a document or a page where there is information. We can see those pages in the browser. Web Page is a single page with information. It can be in any form like texts, images or videos. Whereas the Website is a collection of webpages. The website has its own domain name which is unique throughout the world. Anything can be stored on a website like photos, videos, texts etc . Popular example of online shopping : Amazon,Flipcart etc	
26	Expand the following terms: a. HTTP b. FLOSS c. PAN d. IRC	2
Ans	HTTP – Hyper Text Transfer Protocol FLOSS- Free Libre Open Source Software PAN- Personal Area Network IRC- Internet Relay Chat	
27	Differentiate between call by value and call by reference with a suitable example for each. OR Explain the use of return key word used in a function with the help of a suitable example.	2
Ans	In the event that you pass arguments like whole numbers, strings or tuples to a function, the passing is like call-by-value because you can not change the value of the immutable objects being passed to the function. Whereas passing mutable objects can be considered as call by reference because when their values are changed inside the function, then it will also be reflected outside the function. OR The return statement is used to return a value of function to its calling program. Example: <pre>def mysum(a,b): return a+b print(mysum(10,20))</pre> Output: 30	

28	<p>Rewrite the following code in Python after removing all syntax error(s). Underline each correction done in the code.</p> <pre>p=30 for c in range(0,p) If c%4==0: print (c*4) Elseif c%5==0: print (c+3) else print(c+10)</pre>	2
Ans	<pre>p=30 for c in range(0,p): <u>if</u> c%4==0: print (c*4) <u>elif</u> c%5==0: print (c+3) <u>else</u>: print(c+10)</pre>	
29	<p>What possible outputs(s) are expected to be displayed on screen at the time of execution of the program from the following code? Also specify the maximum values that can be assigned to each of the variables Lower and Upper.</p> <pre>import random AR=[20,30,40,50,60,70]; Lower =random.randint(1,4) Upper =random.randint(2,5) for K in range(Lower, Upper +1): print (AR[K],end="#"")</pre> <p>(i) 40# (ii) 40#50#60# (iii) 50# (iv) All</p>	2
Ans	All of these	
30	<p>What do you understand by Foreign Key in a table? Give a suitable example of Foreign Key from a table containing some meaningful data.</p>	2
Ans	<p>A Foreign Key creates a link between tables. It references the primary key in another table and links it. For example, the DeptID in the Employee table is a foreign key –</p>	

31	Differentiate between fetchone() and fetchall() methods with suitable examples for each.	2
Ans	fetchall() fetches all the rows of a query result. An empty list is returned if there is no record to fetch the cursor. fetchone() method returns one row or a single record at a time. It will return None if no more rows / records are available. Any example.	
32	Categorize the following as DML and DDL Commands: SELECT, INSERT, CREATE, UPDATE, ALTER, DELETE, DROP	2
Ans	DDL – Create, Alter, Drop DML- Select, Insert, Update, Delete	
33	Find and write the output of the following Python code: <pre>def Show(str): m="" for i in range(0,len(str)): if(str[i].isupper()): m=m+str[i].lower() elif str[i].islower(): m=m+str[i].upper() else: if i%2==0: m=m+str[i-1] else: m=m+"#" print(m) Show('HappyBirthday')</pre>	2

Rehaana Medicos Center has set up its new center in Dubai. It has four buildings as shown in the diagram given below:

5

Distance between various building are as follows:

Accounts to research Lab	55m
Accounts to store	150m
Store to packaging unit	160m
Packaging unit to research lab	60m
Accounts to packaging unit	125m
Store to research lab	180m

Number of Computers

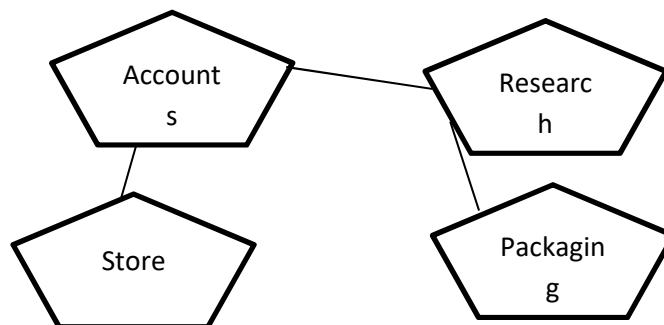

Accounts	25
Research Lab	100
Store	15
Packaging Unit	60

As a network expert, provide the best possible answer for the following queries:

- i) Suggest a cable layout of connections between the buildings.
- ii) Suggest the most suitable place (i.e. buildings) to house the server of this organization.
- iii) Suggest the placement of the following device with justification:
 a) Repeater b) Hub/Switch
- iv) Suggest a system (hardware/software) to prevent unauthorized access to or from the network.
- v) Which cable is best suited for above layout.

Ans

i) Layout-

ii) The most suitable place/ building to house the server of this organization would be building Research Lab, as this building contains the maximum number of computers.

(iii)

a) For layout1, since the cabling distance between Accounts to Store is quite large, so a repeater would ideally be needed along their path to avoid loss of signals during the course of data flow in this route. For layout2, since the cabling distance between Store to Research Lab is quite large, so a repeater would ideally be placed.

b) In both the layouts, a Hub/Switch each would be needed in all the buildings to interconnect the group of cables from the different computers in each building.

(iv) Firewall

(v) Twisted Pair cable / Ethernet cable

39 Write SQL commands for the queries (i) to (iii) and output for (iv) & (v) based on a table COMPANY and CUSTOMER .

(ii) To display the name of the companies in reverse alphabetical order.

(iii) To increase the price by 1000 for those customer whose name starts with 'S'

(iv) SELECT PRODUCTNAME,CITY, PRICE FROM COMPANY,CUSTOMER WHERE COMPANY.CID=CUSTOMER.CID AND PRODUCTNAME="MOBILE";
